PROCHARGER: THE ULTIMATE POWER ADDER®

ProCharger P-1X/D-1X

STREET/STRIP MODELS

- Patented design, no oil lines
- 3-year warranty available
- Emissions legal
- Helical Gearset option for reduced noise level
- 250–1075 hp

ProCharger F-3X-140

RACE MODELS

- Patented friction reduction drive
- 5.40:1–5.63:1 step-up ratio
- Unmatched power and durability
- 9", 9.75", 10.5", 12" and 13.5" volute diameters
- 500–3500+ hp

215+ HP Gain

With ProCharger® technology, reliably adding big horsepower to your engine is a lot easier than you may think. Intercooled ProCharger systems utilize exclusive features and proven technology to deliver reliable 40-85%+ emissions legal power gains with pump gas. Street systems are complete, and daily driveability is unchanged. Intercooled ProCharger systems provide the coolest engine intake charge air temperatures ever, and are so durable they feature the industry's best warranty coverage. ProCharger is also the undisputed leading manufacturer of competition superchargers, with hp gains of 100%–250% common in ProCharged racing applications. Street or strip, ProCharger technology is unmatched. Nothing else comes close!

SUPERIOR TECHNOLOGY

Thanks to relentless innovation, ProCharger technology is generations ahead of the competition. Our exclusive, patented, self-contained, and gear-driven superchargers eliminate tapping into your oil pan, run cooler and produce more power than our competitor's products. With their rugged design, these ProChargers were the first self contained superchargers durable enough to be backed with a 3-year warranty and powerful enough to harness the benefits of intercooling. SC ProChargers also feature an internal step-up ratio of 4.10:1 for improved belt tracking and traction, and maximum low-rpm boost and power. Combined with ATI's superior intercooler designs, this technology creates the ultimate supercharger systems for your street or strip vehicle, with far more power than competing supercharger systems.

- Superior technology produces the undisputed largest power gains with pump gas, and up to twice the maximum horsepower of others
- Largest 50 state emissions-legal power gains
- Patented self-contained superchargers for car, truck, motorcycle and marine applications
- Simple underhood installation
- Industry-best supercharger warranty coverage
- The most complete lineup of superchargers and kits, with both intercooled and non-intercooled systems for 400–3,500+ horsepower
- ProCharger has more experience with today's fuel injected and carbureted engines than any other supercharger manufacturer
- Industry leading service and support

THE INDUSTRY STANDARD

With over 25 years of innovation and experience, ATI ProCharger is the industry leader for aftermarket supercharger systems. The company has built the industry's broadest product line, with systems that produce the most street legal power, and as well as the most powerful race supercharger kits. This tremendous progress has largely been the result of listening to customers and dealers, exploring innovative design options, and investing in technology.

The success of this approach is evidenced not only by the many accomplishments of ATI's customers, but also by the 34 patents awarded to the company, with many more pending. The company's unmatched innovation and accomplishments have also generated much praise and recognition in the automotive press. However, ATI's staff is never satisfied, and will keep working hard to ensure that ProCharger products are the best available.

INDUSTRY'S BEST WARRANTY

Intercooled ProCharger supercharger systems are absolutely the most powerful and reliable centrifugal supercharger systems available for your vehicle. Nothing else even comes close. We stand firmly behind our systems with the industry's best warranty, which is possible because the quality and design of ProCharger systems are simply second to none. Others may try to imitate, but proven ProCharger intercooled supercharger systems are the best you can buy.

50-STATE LEGAL EMISSIONS COMPLIANT

ProCharger is the leader in 50 state legal aftermarket boost, offering the most emissions legal supercharger systems in the industry. ProCharger systems with CARB Executive Orders (EO's) are available for a growing number of automotive, truck and SUV applications, and the ProCharger engineering team works hard to stay current on the latest model years and new vehicle applications. For more information on emissions certifications, give us or your local dealer a call, check out ProCharger.com/EO, or visit ww2.arb.ca.gov.

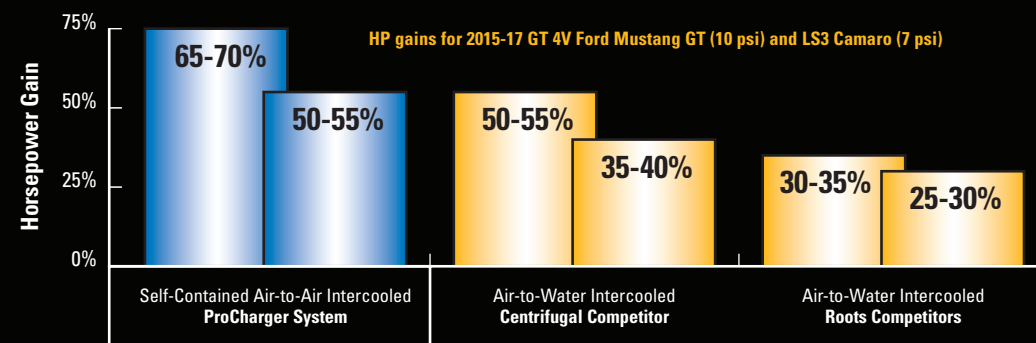

INTERCOOLING ADVANTAGE

Because of its many benefits, intercooling has become the standard for high performance forced induction systems. For automotive street or strip use, air-to-air technology is the dominant intercooler design for both the aftermarket and OEM's, especially with centrifugal compressors (superchargers and turbochargers). Air-to-air intercooling is a natural fit because it allows installation at the front of the car in a fresh air stream, rather than above the hot engine or exhaust. It also avoids having to relocate the battery to the trunk, as well as the risk of engine damage due to a pump or line problem. The largest advantage of air-to-air intercooling however, is its superior performance and reliability.

"Street cars will benefit much more from an air-to-air intercooler. This is because the coolest air charge [from an air-to-water intercooler] is available only with a fresh charge of ice and water. Ice melts quickly when circulated through an intercooler, so its useful life is measured only in minutes."
—Muscle Mustangs and Fast Fords

"When space permits an adequately sized air-to-air intercooler to be fitted and given access to decent airflow, it will always prove superior. The only excuse for a liquid-based intercooler is when severe space restrictions exist [including positive displacement superchargers, due to mounting location] or ... where an iced coolant can be used."
—SuperCharged, Corky Bell

THE MOST POWER PER POUND OF BOOST

ProCharger's industry-leading superchargers and intercooling technology typically produce not only far greater HP gains than any other supercharger manufacturer, but also more power per pound of boost

World's Fastest HEMI, 6.69 @ 211 mph, ProCharger F-3D-102

PROVEN TO PRODUCE THE LARGEST POWER GAINS

With the best and most reliable centrifugal supercharger systems available, it's no wonder that top racers across the nation choose ATI ProCharger for their vehicles. With ATI's proven technology, our racers have accomplished a record-shattering 100+ national championships in the past 15 years. ATI powers over 90% of all centrifugal racers in the 7's, and the most centrifugal racers in the 6's and 5's (1/4 mile, and 1/8th mile equivalent). For serious racers, additional gains of over 1,000 hp are possible by switching to ProCharger.

BYPASS VALVES

SURGE VALVES FOR STREET AND RACE APPLICATIONS

STREET

ProFlow Valve:
The ProFlow valve is the standard surge valve option for our street supercharger systems and kits. Compact in size, it can be fitted into tight spots when space is limited. Its butterfly valve is extremely durable and reliable, and this design creates a straight airflow path which achieves excellent flow for its size. The ProFlow valve can also be paired with a small air filter to minimize noise.

Bullet Valve:
This surge valve's compact design also makes it fit easily in tight spaces. It comes in both an open and closed format. The closed format allows you to recirculate air back into the system, or instead to run to an air filter to minimize noise.

RACE

Race Valve:
This is the industry leading surge valve for both street and race applications. The larger valve diameter is designed for high flow applications. Now available in Red or Black.

ProRace Valve:
One ProRace Valve outflows any other single valve on the market and is our highest-hp bypass valve option. This massive flow capacity comes from a piston style valve design (patent pending) that allows for a significant increase in certain area over traditional style valves, while still fitting into a reasonably sized package. It also incorporates a v-band clamp for an easy install.

WHY ARE BYPASS/SURGE VALVES SO IMPORTANT?

More horsepower is associated with more airflow. It is important to get the air charge out of the tubing quickly when you let off of the throttle to avoid compressor surge and potential damage to the ProCharger Supercharger or other power adder, and help prevent other issues such as throttle hang, and belt snap on cog or serpentine driven applications. ProCharger currently has 5 different Bypass Valve models available based on the needs of different applications.

Competition Valve:

Designed with the Pro Mod racer in mind; compact, light and fast acting. For use as a pair in applications above 3,000 HP.

FOLLOWING PROCHARGER SYSTEMS AVAILABLE FOR:
Mercury 525 EFI, 500 EFI & HP 500; MerCruiser 496 Mag, 496 Mag HO, 502 Mag MPI, 454 Mag MPI, 7.4 MPI, 6.2 MPI, 5.7 MPI and carbureted engines with additional applications coming soon, call for details.

- Blue = intercooled products
- Black = non-intercooled products

PROCHARGER IN THE MEDIA

The media, from magazines, websites and video content producers to even video games love ProCharger and regularly feature our superchargers and systems. On our website "click the videos tab" to see a bunch of examples of small screen appearances in "Engine Power TV," Stacey David's "Gearz," "Street Outlaws," and ESPN's "Inside Drag Racing" as well as other video appearances on YouTube from influencers like Goonzsquad, Hot Rod and many more.

INFORMATION, APPAREL & MORE!

Check out our website for more application-specific information about our complete line of supercharger systems, cool videos and vehicle galleries where you can create your own gallery entry with your ProCharger-powered car, truck, race car, motorcycle, ATV or boat!

While you're on the site, make sure to check out the online versions of ProCharger's industry leading, downloadable catalogs for whatever vehicle platform you have or are considering. And show your ProCharger pride with a big selection of ProCharger apparel from T-shirts, to hats, license plate frames, gauges and more at ProCharger.com/store.

STAY UP TO SPEED

Keep up with all the latest news, events and amazing, real-world customer and racer accomplishments via the ProCharger Blog, at ProCharger.com/blog.

STATE-OF-THE-ART TEST FACILITY

ATI's aerodynamics test lab utilizes state of the art equipment and three separate test cells to help ensure that ProCharger superchargers are the best available. This test lab, the industry's largest and most capable, allows ProCharger engineers to simultaneously perform aerodynamic (efficiency), gearcase, and long term durability testing. A hallmark of ATI's success has been a thorough understanding of engine dynamics and customer usage, both on the street and at the track. This helps ensure that testing in the lab, on the dyno, at the track and on the road are all representative of real world performance. The result has been a best-in-class history of innovation, and record setting products. Additionally, knowledge transferred from Inovair, ATI's industrial products division which features gearcases designed for nonstop 24/7 operation and compressor efficiencies exceeding 80%, now helps fuel further advances by ProCharger.
